Welcome to QCyberPrepare

Help your company prepare for cyber threats.

Use QCyberPrepare to invite all key internal and external stakeholders so you're ready and able to launch a coordinated response, should a crisis occur. Set up your saferoom by storing cyber-response-related documents (incident response plan, cyber policy, contractual obligations, etc.) **outside** your corporate network (hosted by CYGNVS) for easy access in the event your company's communications systems are compromised.

In the event of a breach, you can't be certain the files and communication channels on your network will be available or clear of threat actors. Let QCyberPrepare be your organization's cyber saferoom where you can launch your incident response plan in a secure platform with secure messaging.

QCyberPrepare in partnership with CYGNVS, is built to empower organizations to be connected, confident, in control before, during and after a cyber crisis.

Key benefits include:

- Guided cyber response platform to help businesses ready themselves for potential cyber threats.

- A place for critical documents to be stored in a secure location, ensuring accessibility even if the main corporate network becomes compromised during a cyber incident.

- An out-of-band solution.

- Invite and collaborate with your incident response team to prepare for a potential cyber event.

- 24/7 secure access to incident response documents and messaging capabilities so your business can launch into response mode as soon as an incident occurs.

- Secure messaging and video call capabilities

Opportunity

QCyberPrepare is available to all QBE primary Cyber insurance customers.
